Gender Pay Gap Information – 5 April 2025

The information presented has been prepared in accordance with the Equality Act 2010 (Gender Pay Gap Information) Regulations 2017. Our figures adhere to specified time periods, criteria and calculations as defined by the Gender Pay Gap legislation. We have taken all reasonable steps to ensure their accuracy.

The Gender Pay Gap is defined as the difference in the average earnings of male and female employees across the company. It is important to note that the Gender Pay Gap is not the same as equal pay. Equal pay looks at the pay of males and females in the same or equivalent roles. Gender Pay looks at the pay of males and females across the whole company regardless of their role.

1. Gender pay gap

The percentage difference between female employee hourly pay compared to male employees:

	April 2025	April 2024	April 2023
Mean	14.3% lower	11.3% lower	10.6% lower
Median	6.8% lower	14.0% lower	7.7% lower

The average hourly pay of males is 14.3% higher than that of females which represents an increase on the April 2024 position. The primary reason for the pay gap is because there is less female representation in the higher end of the upper pay bands compared to the lower pay bands. The median figure gives an indication about the difference in the middle hourly rate of pay within the organisation.

Due to the relatively low number of female employees, both measures are very sensitive to changes in that data population which has been evident in this year's results. They compare with the Office for National Statistics estimates of a 10.9% mean (6.9% median) gender pay gap across all UK industries in 2025 and 7.1% mean and 12.5% median within the manufacturing sector.

2. Bonus gender pay gap

The percentage difference between total bonus pay during the year for female employees compared to male employees:

	April 2025	April 2024	April 2023
Mean	12.3% lower	20.0% lower	3.7% lower
Median	35.3% higher	47.9% higher	25.9% higher

Our bonus gap continues to be sensitive of the fact that there are fewer women in senior roles in the organisation. The average bonus paid to males in the year is 12.3% higher than that of females, however, the median total bonus paid to females is 35.3% higher than that paid to males.

3. Proportion of males and females who received a bonus payment

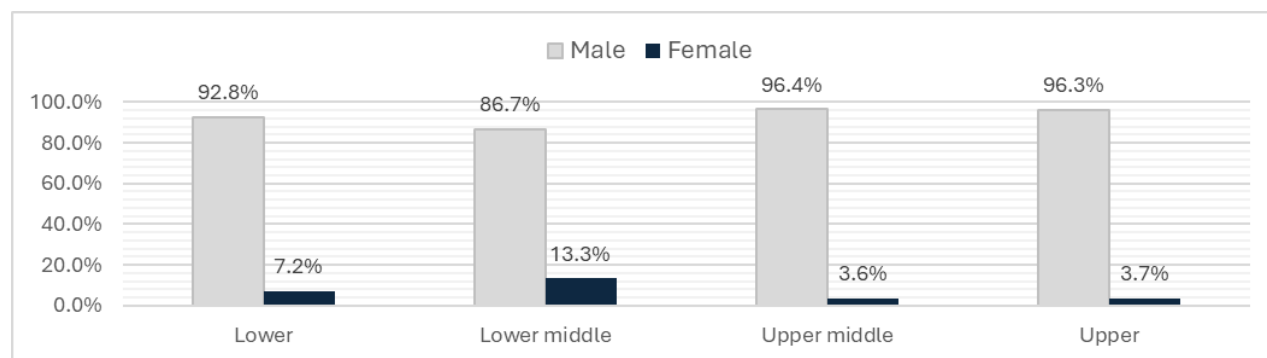

The proportion of males and females who received a bonus during the year:

	April 2025	April 2024	April 2023
Males	100%	100%	95%
Females	100%	100%	100%

All employees participate in a company bonus scheme and, once again, 100% of females and males received a bonus in the period.

4. Gender pay gap quartiles

The percentage of males and females in each pay quartile is as follows:

The manufacturing sector is recognised to be a male dominated industry. Our male / female workforce split is representative of this and will therefore affect our Gender Pay Gap figures. It is important to remember our calculations are based on a workforce made up of 7% women and 93% men.

Our results highlight a broadly consistent proportion of female employees in the upper middle and upper quartiles, but with the greatest concentration being in the lower quartile.

Future commitment

We remain committed to ensuring that all employees are treated fairly and consistently and that no employee is treated adversely due to gender or any other characteristic such as nationality, ethnicity or age.

Attracting talented women into our industry remains a challenge but we are committed both to equality and encouraging a diverse workforce. Recruiting, training and retaining an engaged, skilled workforce remains critical to the continued success of the company.
